Your Partner in Ladder Safety

INVENTED BY

Calvin Vernon

Patent Protected.
Market Ready.

THE PROBLEM

Labels don't stop top-step misuse

Standing on the top step or cap is a leading cause of ladder falls. OSHA rules forbid it. Yet workers still climb high for extra reach, and training alone hasn't solved it.

THE SOLUTION

Hardware, not another warning

Not A Step is a patented ladder safety device that physically blocks access to the top step while creating an organized work surface one step down.

How It Works

- Top cap cover sits over existing cap and blocks standing
- Step guard hooks to top step and prevents climbing past
- Tool holders keep drills, fasteners, paint within reach
- Straps wrap rails so unit stays put during use

KEY FEATURES

Built for the job site

Eliminates Top Step Misuse

The workspace is in the way. Workers can't stand where they shouldn't.

Secure Tool & Supply Storage

Compartments for drills, fasteners, cans. Hands stay free for climbing.

Universal Fit

Works with most A-frame step ladders from 4 to 10 feet.

Quick Installation

Tool-free attachment. Convenient carrying handles for transport.

BENEFITS

Reduces Violations

Helps avoid OSHA fines

Cuts Costs

Fewer claims & lost days

Saves Time
